

Garage Band Tutorial

1. Open Garage Band

2. Choose Voice

Note : the type of project you choose will not affect the ability to slice the track.

3. Import sound track

Press the icon to the top right corner of the window :
the icon is a camera and musical note

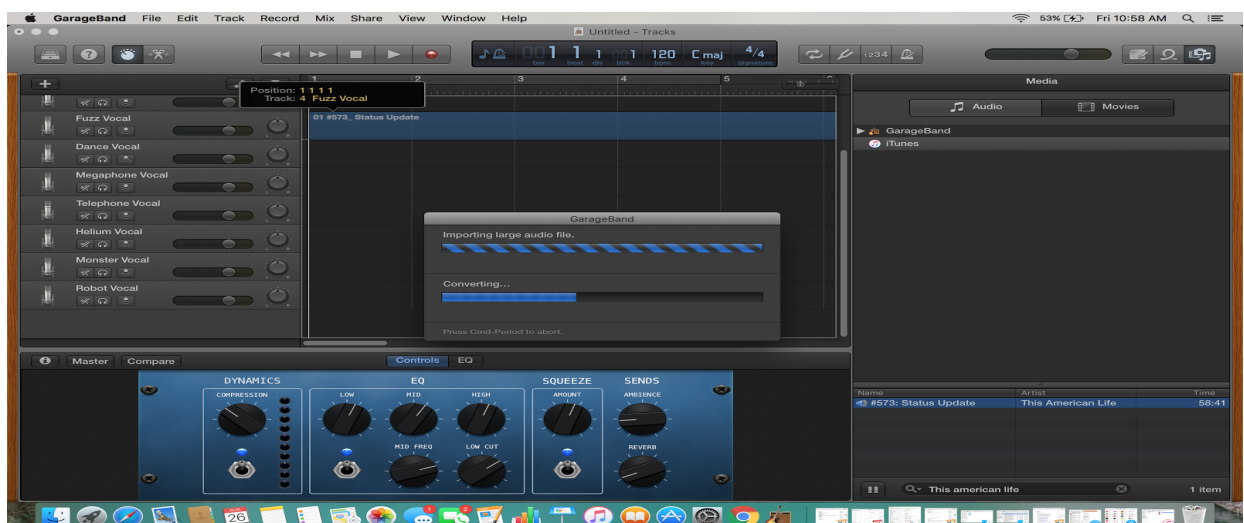

4. At search bar at bottom right corner enter name of file you wish to import.

4. Now drag the file to the editing area

4.1 After you drag you will see that Garage Band is converting the audio file.

4.3 Once you see the audio file is orange, it is completely downloaded into player.

5. In order to play file, click on the orange file and press the spacebar.

6. Once you get to a place that you want to cut, trim, crop, or slice (all of these words means the same thing). Press “command” “T”

Note: If you have trouble remembering this keyboard command,
Press “Edit” on the upper toolbar to find the “split regions at PlayHead” keyboard command.

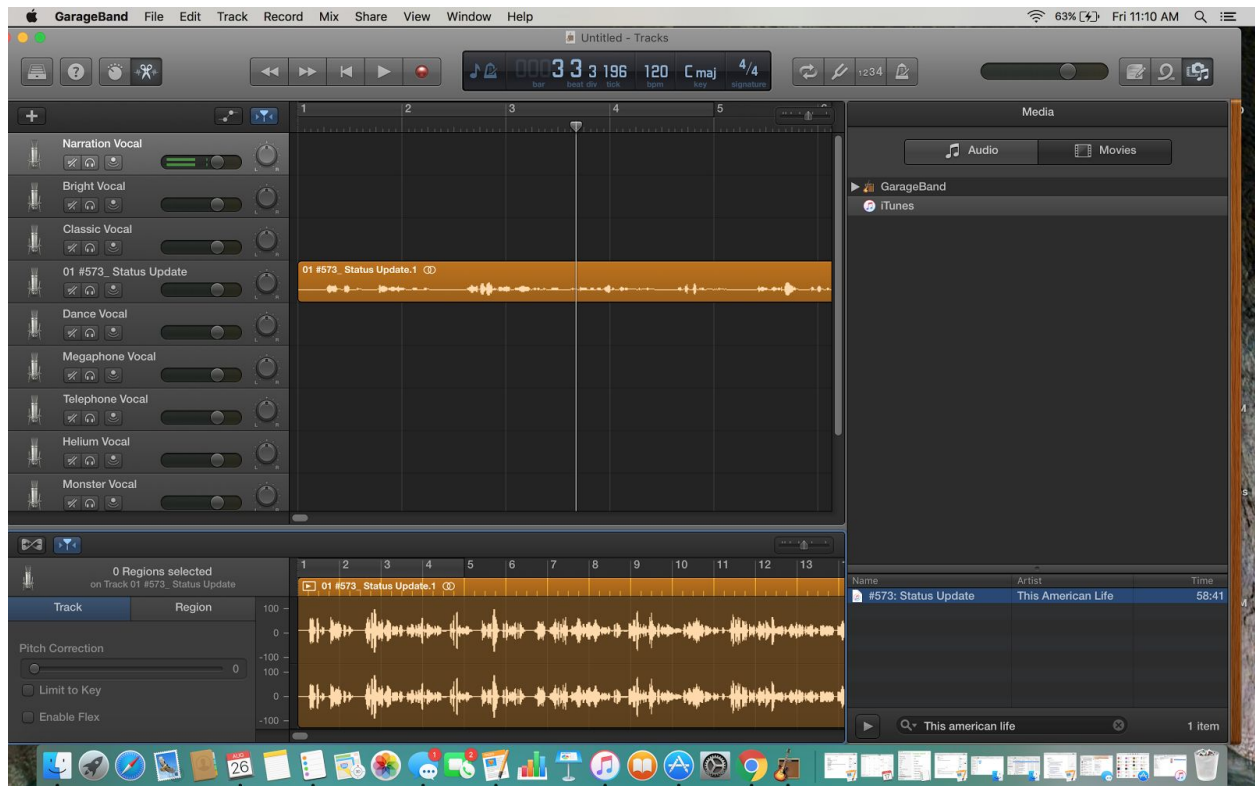

To get a better look at where you would like to split, press the scissors icon on the top left.

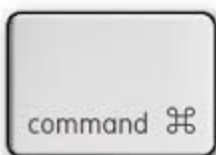

view which enlarges the audio clip.

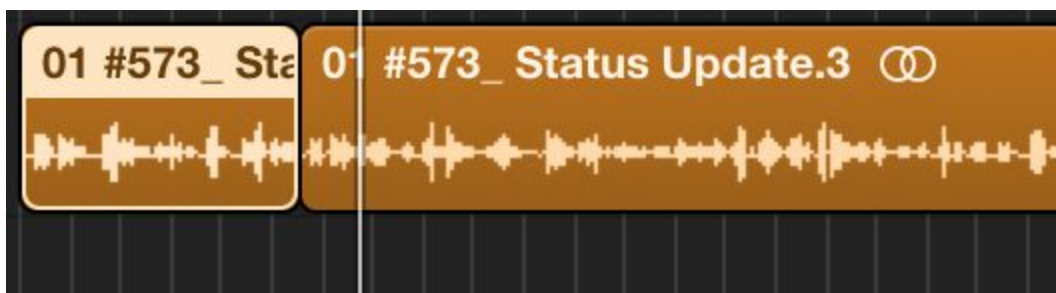

The scissors icon stands for the editor

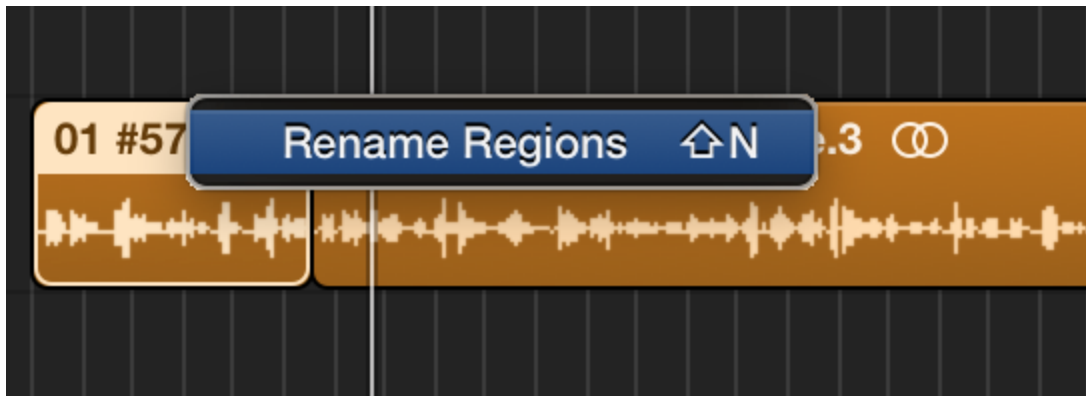

6. Once you get to a place that you want to cut, trim, crop, or slice (all of these words means the same thing). Press “command” “T”

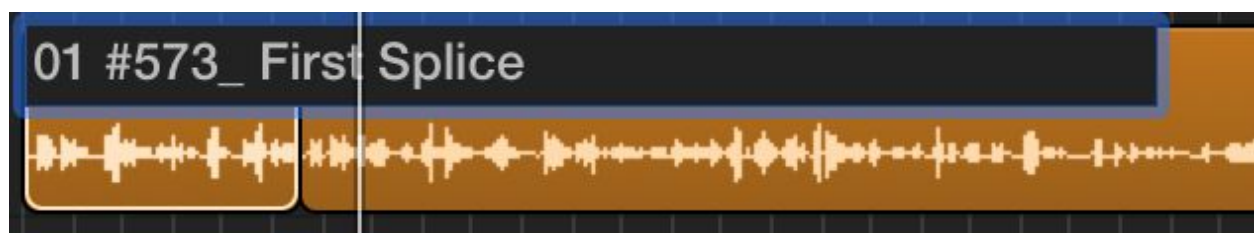

After Pressing “command T”, the audio clip is split wherever the white “PlayHead” cursor is. (I moved the cursor out of the way so that the split is visible).

5. You can now rename the segments by right clicking the region OR pressing “up arrow N”

Note: I renamed this left segment “#573_First Splice”

NOTE: If you wish to JOIN the two regions that you just split because of a mistake:
Press “command j”
